

*My name is Nikita, and I study at ITMO University. I am an open-minded and curious person who enjoys learning new things. My friends often describe me as persistent and hardworking, but also easy to talk to.*

*At school, I always liked mathematics and physics because they taught me discipline and logic. I also studied computer science, which quickly became my main passion. Step by step, I developed problem-solving skills and analytical thinking.*

*At university, I study information technologies and programming. I already completed courses in algorithms and data structures, which were challenging but exciting. I also studied networking and system administration, where I practiced teamwork and responsibility. During labs and projects, I learned how important it is to communicate clearly with others. These experiences helped me grow more confident and organized in my academic life.*

*I am ambitious and like to set goals that motivate me to improve. Even when the tasks are complex, I try to stay patient and keep moving forward. I want to continue developing my skills and explore research opportunities in my field.*

*Overall, I am a motivated student who combines curiosity with persistence in order to succeed.*
